

# Malwarebytes

<https://www.malwarebytes.org/>  
(or simply type *Maliwarebytes* into Google)

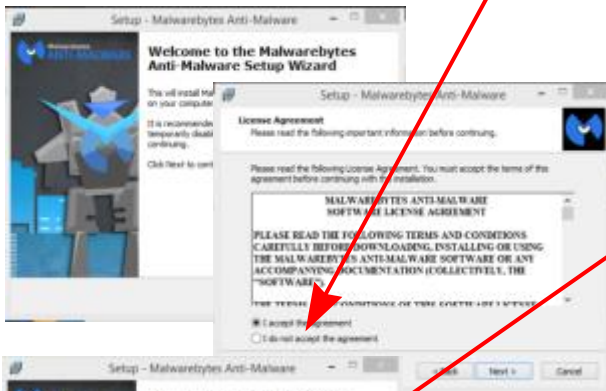

Visit the Malwarebytes website and choose the **'Free Version Download'**

You will encounter the usual prompt to buy the full version (*of course!*), and you may wish to, but most first-time users will continue to opt to **'Download Free Version'**.

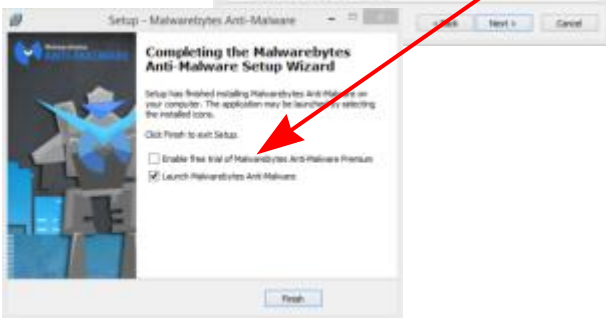

Follow the usual prompts to save the file then locate it and click on it to run the Set-up Wizard.

Agree to the licence conditions then follow the prompts accepting all the defaults . . .

**BUT**

. . . near the end, when you are offered the opportunity to **'Enable free trial of Malwarebytes Anti-Malware Premium'**, decline the offer by unticking the top tick-box (*it will be ticked by default!*)

Leave the box against **'Launch Malwarebytes Anti-Malware'** ticked and click on Finish.

On completion, the Malwarebytes dashboard will be displayed.

Note that the word **Free** should appear in parentheses against the title.

After first installation, Malwarebytes will need updating. Clicking on **Scan Now** should cause this to happen.

If you accepted the defaults, there will be a shortcut icon on your Desktop and your computer can be maintained simply by clicking on this icon - say, once each week to run a scan.
